Bisphosphonate-associated osteonecrosis of the jaw
The Canadian Task Force on Osteonecrosis of the Jaw,
with representatives from medical, surgical, and pathology
disciplines, has developed Canadian consensus practice
guidelines for bisphosphonate-associated osteonecrosis of
the jaw. 3 These guidelines are based on a systematic
review of the literature.

[Bisphosphonates and Osteonecrosis of the Jaw: A ...](#)
Bisphosphonates are commonly prescribed to inhibit bone

loss in patients with osteoporosis, as well as osteopenia, cancer, and Paget's disease of the bone. Recently, scientific literature has addressed a possible relationship between bisphosphonates and osteonecrosis of the jaw (ONJ). It is important to note that though the risks for developing ONJ are much higher for cancer patients on intravenous bisphosphonate therapy (used to reduce bone pain), the occurrence of ONJ also in patients
