Reaching from interior Alaska across Canada to Labrador and Newfoundland, North America's boreal forest is the largest wilderness area left on the planet. It is critical habitat for billions of birds; more than 300 species regularly breed there. After the breeding season, many boreal birds migrate.

[Boreal Birds of North America: A Hemispheric View of Their ...](#)

The 1.5 billion acres of boreal forests of North America are the nesting ground for over 300 different species of birds (Blancher and Wells 2005). An estimated 90% of the boreal forest breeding birds migrate out of the area during the boreal winter period (Rich et al. 2004). While a majority migrate to southern United States and Central America, a significant number reach the five countries.
