Exertional Heat Illnesses - NATA

Exertional heat stroke is an elevated core temperature (usu-ally .408C [1048F]) associated with signs of organ-system failure due to hyperthermia. The central nervous system neu-rolologic changes are often the rst marker of exertional heat stroke. Exertional heat stroke occurs when the temperature regulation system is overwhelmed due to excessive endoge-nous heat production or inhibited heat

The origins of molluscs - ResearchGate

The almost unmatched diversity of molluscan morphological phenotypes is exemplified by well-known representatives such as the gastropods (snails, slugs), bivalves (clams, mussels), and cephalopods
