Stem Cells and Cancer Stem Cells, Volume 5 eBook by ...

It is pointed out that a cancer stem cell is a type within a tumor that possesses the capacity of self-renewal and can give rise to the heterogeneous lineages of cancer cells, which comprise the tumor.

Stem cells and cancer | Harvard Stem Cell Institute (HSCI)

After their work is done, they leave behind a guardian population of stem cells that repair each tissue as the need arises. When the stem cell divides into two, it creates one progenitor and renews itself. The progenitor continues its path of differentiation into mature, specialized cells, while the new stem cell waits for the next round when it is called upon to replenish tissue. Stem cells survive much longer than ordinary cells, increasing the chance that they might accumulate genetic
