Steven Strogatz, a leading mathematician in the fields of chaos and complexity theory, explains how enormous systems can synchronize themselves, from the electrons in a superconductor to the pacemaker cells in our hearts. He shows that although these phenomena might seem unrelated on the surface, at a deeper level there is a connection, forged by the unifying power of mathematics. [Steven Strogatz: The science of sync | TED Talk](#) Mathematician Steven Strogatz shows how flocks of creatures (like birds, fireflies and fish) manage to synchronize and act as a unit -- when no one's giving orders. The powerful tendency extends into the realm of objects, too.

I enjoyed Steven Strogatz's Sync very much. It is a rare book, more technical than a popular science piece yet written extremely well with the same craft of writing as a NY Times science piece -- unlike many textbooks -- and thus easy-to-read and imparting a lot of intuition and insight. Sadly, I suspect that the group that this type of book appeals to is fairly small -- that is, people who
